

Week 6 conclusion of main lesson:

Introduction:	<p>Over the last 6 weeks we have discussed the rhythms and patterns of the Earth and the Human body. We discussed the layers of the earth and that we are made of the same chemicals as everything on Earth (Na C H O).</p> <p>We have discussed Darwin's theory of evolution, natural selection and the relationship between humans and the environment which they live in. We began to explore ideas about how humans may evolve and adapt in the future.</p> <p>At home you have been reading about Historical factors which have affected the cultural evolution of nations such as Nazi Germany and the past popularity of Eugenics in the U.S.</p> <p>We have also discussed animals being sentient and conscious and begun to explore Gaia Theory, linking this with how Coronavirus is helping us to reduce air pollution.</p> <p>I would now like to draw all that knowledge together and for you to form some conclusions.</p> <p>We will consider these questions:</p> <p>What has the Human being got that separates us from the "natural world"?</p> <p>What makes us different from the other animals we share the planet with?</p>
Task	<p>Write at least one paragraph to give your answer:</p> <p>1: Are humans entirely self-determining/ free to do whatever they want?</p> <ul style="list-style-type: none">- What factors might limit or influence these choices?<ul style="list-style-type: none">• Think back to our work on Geographical identity• Do we all live by the same rules or have the same opportunities?
