

# Partitioning into Tens and Ones

I can use partitioning to understand place value.

I understand that two-digit numbers contain tens and ones.

The number 67 has 6 tens and 7 ones.

1. Choose 4 two-digit numbers and partition them into tens and ones in the table below.

My 2-digit numbers	This is how I partition them:

2. Circle the ones:

24	45	78	67
----	----	----	----

3. Colour the tens:

76	91	12	20
----	----	----	----
